

IMPORTANT – READ CAREFULLY

How to use and care for your new magnetic vehicle sign.

Preparation for Installation

The vehicle surface and the brown, magnetic side of the sign should be thoroughly cleaned, dried, and waxed prior to applying.

Installation

Make contact on one edge of the sign to the vehicle surface in the desired location, then let the adjacent part of the sign contact the vehicle surface until the entire sign is held magnetically to the vehicle. If the sign is not in the desired position, remove and repeat the process. (Do not try to straighten the sign by pulling when it is held magnetically to the vehicle. This might stretch the material, especially when hot.)

Avoid placing your sign over chrome trim or surface protrusions of any kind

The temperature of the sign should be at least 60 degrees F during installation. The temperature of the vehicle surface does not matter.

Removal

Always remove the sign by lifting from the center of the two opposite sides. Never start at the corners. This precaution will avoid bent corners and reduced adhesion.

Caution

Magnetic vehicle signs will not adhere to areas on your car where plastic body fillers have been used. In order to avoid losing your signs, use caution in applying vehicle signs to areas of your car that have been damaged and repaired.

Maintenance

Your signs should be periodically removed - once a week minimum. Wash and wipe dry both the vehicle and the back of the sign. Trapped moisture, dirt, or chemicals may harm your vehicle finish. Clean your sign and car with plain water or warm water and a mild detergent.

Storage

To avoid cracking or breaking, do not fold or crease. Store your magnetic signs flat. If stored rolled, a 3" diameter is recommended with the lettering on the outside of the roll.

Disclaimer: There is no warranty expressed or implied against loss of signs or damage to vehicle surfaces, as retailers have no control over how signs are cared for, altered, stored, and /or used, or the surface to which the signs are applied.
